

# Working group "Data repositories and analytics"

## General notes:

- Focus: data generation, quality, management, governance (incl. storage and sharing), and dissemination
- Conditions: coordinated, cost-effective and resource efficient across sectors/regulatory fields
- Create synergies with other working groups: exposure models (model requirements, ...), education and communication (data training), data production (identification of missing data, reporting guidelines, ...), and integrated frameworks & policy efficiency (data-to-decision transfer, ...)
- Interoperability requirements determines way from databases to interoperable data (exchange) platforms
- Performance indicators relevant for developing best data practice for different purposes (standardization)
- Policy level needs: data quality & access improvements, new monitoring/IT tools, early warning system

## Important key messages:

- Beware of **intersection with other working groups** → coordinated effort (ISES EU?)
- **Prioritize WG actions:** start with SOTA mapping and data inventory, then harmonization, sharing principles, new data
- **Capacity building** most relevant (community building) to implement discussed actions
- **European Commission** needs to call for various of the identified actions to initiate the process, as otherwise no-one would like to follow up

→ See specific tasks table for further details
